

This is John

John is in a COVID-19 infected country.
John is scared of catching this infectious disease.

John is living with his lovely grandmother because she needs assistance.
But John doesn't want to infect her.

John is faced to buttons in many places.

John knows they are high risk contaminated surfaces.

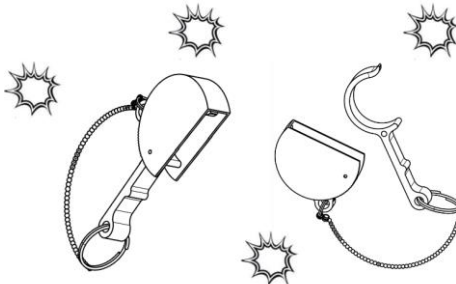

John is also scared of touching public building's door handles.
John is not at ease going outside.

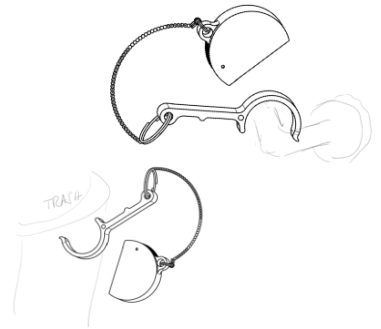

???

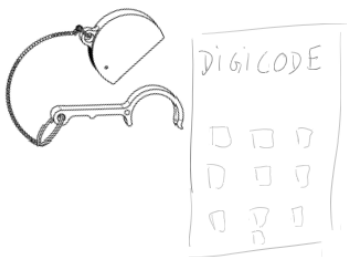

John can be happy, we found a solution for him.

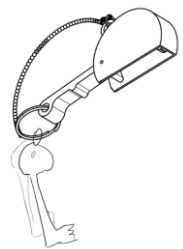

RINO, a small 3D printed keychain with a self-cleaning copper coating.

John can now open door handles, trash bins, and so on.

Or even press small buttons without touching them.

John is happy.
Be like John, safe and happy.
